

Meet the new **MODEL CENTER** App

LiveJasmin releases new features for its Messenger.

Luxembourg – July 26th - LiveJasmin, the multiple award-winning adult live streaming website, believes in constant innovation and perpetually improving their services, which is why they recently introduced huge changes to their Messenger app, developed in-house.

As sharing experiences and memories with others has always been the backbone of human interaction, LiveJasmin introduced the option of sharing pictures and videos through their Messenger app, to fully flesh out the users' experiences. This, on top of the fact that with the Jasmin Messenger members can stay in constant contact with tens of thousands of models, 24/7, marks a new beginning in how interaction in the live camming industry is defined.

"We believe that gestures as simple as sending selfies strengthen the relationship between users and creates a personal, playful, and authentic atmosphere that is more enjoyable for both parties." explained Zsolt Theiss-Balazs, CPO of LiveJasmin

The Group is always thinking of how to improve its services and how to incorporate other features that can be found in various industries. Being able to share content privately is an obviously popular service, which LiveJasmin wanted to develop to allow its users the freedom of interaction that the internet and technology provides.

Share your
photos and **videos**

"Introducing these new features to share content was a slight technical challenge. More than 300 developers are working on LiveJasmin every single day to maintain our high level of quality and service that our members are accustomed to." said Kolos Kaszály, CTO of LiveJasmin.
